Exp. Name: **Write a C program to Search a Key element using Linear search Technique**

Date: 2023-05-01

Aim:

Write a program to search a **key element** with in the given array of elements using **linear search** process.

At the time of execution, the program should print the message on the console as:

Enter value of n :

For example, if the user gives the **input** as:

Enter value of n : 3

Next, the program should print the messages one by one on the console as:

Enter element for a[0] :
Enter element for a[1] :
Enter element for a[2] :

if the user gives the **input** as:

Enter element for a[0] : 89
Enter element for a[1] : 33
Enter element for a[2] : 56

Next, the program should print the message on the console as:

Enter key element :

if the user gives the **input** as:

Enter key element : 56

then the program should **print** the result as:

The key element 56 is found at the position 2

Similarly if the key element is given as **25** for the above one dimensional array elements then the program should print the output as "**The key element 25 is not found in the array**".

Fill in the missing code so that it produces the desired result.

Source Code:

LinearSearch.c

```

#include<stdio.h>
int main()
{
    int a[10],i,j,n,flag=0;
    printf("Enter value of n : ");
    scanf("%d",&n);
    for(i=0;i<n;i++)
    {
        printf("Enter element for a[%d] : ",i);
        scanf("%d",&a[i]);
    }
    printf("Enter key element : ");
    scanf("%d",&j);
    for(i=0;i<n;i++)
    {
        if(j==a[i])
        {
            flag++;
            break;
        }
    }
    if(flag==1)
    {
        printf("The key element %d is found at the position %d",j,i);
    }
    else
    {
        printf("The key element %d is not found in the array",j);
    }
    printf("\n");
}

```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Enter value of n :
4
Enter element for a[0] :
1
Enter element for a[1] :
22
Enter element for a[2] :
33
Enter element for a[3] :
44
Enter key element :
22
The key element 22 is found at the position 1

Test Case - 2

User Output

```
Enter value of n :  
7  
Enter element for a[0] :  
101  
Enter element for a[1] :  
102  
Enter element for a[2] :  
103  
Enter element for a[3] :  
104  
Enter element for a[4] :  
105  
Enter element for a[5] :  
106  
Enter element for a[6] :  
107  
Enter key element :  
110  
The key element 110 is not found in the array
```

Before sorting the elements in the array are

Value of a[0] = 1

Value of a[1] = 6

Value of a[2] = 3

Value of a[3] = 8

Value of a[4] = 4

After sorting the elements in the array are

Value of a[0] = 1

Value of a[1] = 3

Value of a[2] = 4

Value of a[3] = 6

Value of a[4] = 8

S.No: 9

Exp. Name: **Write a program to sort Ascending order the given elements using quick sort technique.**

Date: 2023-05-08

Aim:

Write a program to **sort** (**Ascending order**) the given elements using **quick sort** technique.

Note: Pick the first element as pivot. You will not be awarded marks if you do not follow this instruction.

At the time of execution, the program should print the message on the console as:

Enter array size :

For example, if the user gives the **input** as:

Enter array size : 5

Next, the program should print the following message on the console as:

Enter 5 elements :

if the user gives the **input** as:

Enter 5 elements : 34 67 12 45 22

then the program should **print** the result as:

Before sorting the elements are : 34 67 12 45 22
After sorting the elements are : 12 22 34 45 67

Note: Do use the **printf()** function with a **newline character** (**\n**).

Source Code:

QuickSortMain.c

```

#include<stdio.h>
void display(int arr[],int n);
int partition(int arr[],int lb,int ub);
void quicksort(int arr[],int low,int high);
void main(){
    int arr[15],i,n;
    printf("Enter array size : ");
    scanf("%d",&n);
    printf("Enter %d elements : ",n);
    for(i=0;i<n;i++){
        scanf("%d",&arr[i]);
    }
    printf("Before sorting the elements are : ");
    display(arr,n);
    quicksort(arr,0,n-1);
    printf("After sorting the elements are : ");
    display(arr,n);
}
void display(int arr[15],int n){
    int i;
    for(i=0;i<n;i++){
        printf("%d ",arr[i]);
    }
    printf("\n");
}
int partition(int arr[15],int lb,int ub){
    int pivot,down=lb,up=ub,temp;
    pivot=arr[lb];
    while(down<up){
        while(arr[down]<=pivot&&down<up){
            down++;
        }
        while(arr[up]>pivot){
            up--;
        }
        if(down<up){
            temp=arr[down];
            arr[down]=arr[up];
            arr[up]=temp;
        }
    }
    arr[lb]=arr[up];
    arr[up]=pivot;
    return up;
}
void quicksort(int arr[15],int low,int high){
    int j;
    if(low<high){
        j=partition(arr,low,high);
        quicksort(arr,low,j-1);
        quicksort(arr,j+1,high);
    }
}

```

Aim:

Write a program to implement queue using **dynamic array**.

In this queue implementation has

1. a pointer 'queue' to a dynamically allocated array (used to hold the contents of the queue)
2. an integer 'maxSize' that holds the size of this array (i.e the maximum number of data that can be held in this array)
3. an integer 'front' which stores the array index of the first element in the queue
4. an integer 'rear' which stores the array index of the last element in the queue.

Sample Input and Output:

```
Enter the maximum size of the queue : 3
1.Enqueue 2.Dequeue 3.Display 4.Exit
Enter your option : 2
Queue is underflow.
1.Enqueue 2.Dequeue 3.Display 4.Exit

Exp. Name: *Program to insert into BST and traversal using In-order, Pre-order and Post-order*

Date: 2023-06-18

Aim:

Write a program to create a binary search tree of integers and perform the following operations using linked list.

5. Insert a node
6. In-order traversal
7. Pre-order traversal
8. Post-order traversal

Source Code:

BinarySearchTree.c

```

#include<stdio.h>
#include<stdlib.h>
struct node
{
    int data;
    struct node *left, *right;
};
typedef struct node *BSTNODE;
BSTNODE newNodeInBST(int item)
{
    BSTNODE temp = (BSTNODE)malloc(sizeof(struct node));
    temp->data = item;
    temp->left = temp->right = NULL;
    return temp;
}
void inorderInBST(BSTNODE root)
{
    if (root != NULL)
    {
        inorderInBST(root->left);
        printf("%d ", root->data);
        inorderInBST(root->right);
    }
}
void preorderInBST(BSTNODE root)
{
    if (root != NULL)
    {
        printf("%d ", root->data);
        preorderInBST(root->left);
        preorderInBST(root->right);
    }
}
void postorderInBST(BSTNODE root)
{
    if (root != NULL)
    {
        postorderInBST(root->left);
        postorderInBST(root->right);
        printf("%d ", root->data);
    }
}
BSTNODE insertNodeInBST(BSTNODE node, int ele)
{
    if (node == NULL)
    {
        printf("Successfully inserted.\n");
        return newNodeInBST(ele);
    }
    if (ele < node->data)
        node->left = insertNodeInBST(node->left,ele);
    else if (ele > node->data)
        node->right = insertNodeInBST(node->right,ele);
    else
        printf("Element already exists in BST.\n");
}

```

```

void main()
{
    int x, op;
    BSTNODE root = NULL;

Aim:

Write a program to **search** the given element from a list of elements with **binary search** technique using **recursion**.

At the time of execution, the program should print the message on the console as:

Enter value of n :

For example, if the user gives the **input** as:

Enter value of n : 5

Next, the program should print the following messages one by one on the console as:

Enter 5 elements :

if the user gives the **input** as:

Enter 5 elements : 33 55 22 44 11

then the program should **print** the result as:

After sorting the elements are : 11 22 33 44 55

Next, the program should print the message on the console as:

Enter key element :

if the user gives the **input** as:

Enter key element : 11

then the program should **print** the result as:

The given key element 11 is found at position : 0

Similarly, if the key element is given as **18** for the above example then the program should print the output as:

The given key element 18 is not found

Note: Write the functions **read()**, **bubbleSort()**, **display()** and **binarySearch()** in **BinarySearch.c**

Source Code:

BinarySearch.c

```

#include <stdio.h>
void read(int a[20], int n)
{
    int i;
    printf("Enter %d elements : ", n);
    for (i = 0; i < n; i++)
    {
        scanf("%d", &a[i]);
    }
}
void bubbleSort(int a[20], int n)
{
    int i, j, temp;
    for (i = 0; i < n - 1; i++)
    {
        for (j = 0; j < n - i - 1; j++)
        {
            if (a[j] > a[j+1])
            {
                temp = a[j];
                a[j] = a[j+1];
                a[j+1] = temp;
            }
        }
    }
}
void display(int a[20], int n)
{
    int i;
    for (i = 0; i < n; i++)
    {
        printf("%d ", a[i]);
    }
    printf("\n");
}
int binarySearch(int a[20], int low, int high, int key)
{
    int mid;
    if (low <= high)
    {
        mid = (low + high) / 2;
        if (a[mid] == key)
            return mid;
        else if (key < a[mid])
            binarySearch(a, low, mid - 1, key);
        else if (key > a[mid])
            binarySearch(a, mid + 1, high, key);
    }
    else
    {
        return -1;
    }
}
void main()
{

```

```

scanf("%d", &n);
read(a, n);
bubbleSort(a, n);
printf("After sorting the elements are : ");
display(a, n);
printf("Enter key element : ");
scanf("%d", &key);
flag = binarySearch(a, 0, n - 1, key);
if (flag == -1)
{
    printf("The given key element %d is not found\n", key);
}
else
{
    printf("The given key element %d is found at position : %d\n", key,
flag);
}
}

```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Enter value of n :

5

Enter 5 elements :

33 55 22 44 11

After sorting the elements are : 11 22 33 44 55

Enter key element :

11

The given key element 11 is found at position : 0

Test Case - 2

User Output

Enter value of n :

4

Enter 4 elements :

23 9 45 18

After sorting the elements are : 9 18 23 45

Enter key element :

24

The given key element 24 is not found

Exp. Name: **Write a C program to Copy last n characters from one File to another File**

Date: 2023-06-27

Aim:

Write a program to **copy** last **n** characters from **file-1** to **file-2**.

- open a new file "**TestDataFile1.txt**" in write mode
- write the content onto the file
- close the file
- open an existing file "**TestDataFile1.txt**" in read mode
- open a new file "**TestDataFile2.txt**" in write mode
- read the number of characters to copy
- set the cursor position by using `fseek()`
- copy the content from existing file to new file
- close the files
- open the copied file "**TestDataFile2.txt**" in read mode
- read the text from file and print on the screen
- close the file

Source Code:

Copy.c

```

#include <stdio.h>
void main()
{
    FILE *fp, *fp1, *fp2;
    int num, length;
    char ch;
    fp = fopen("TestDataFile1.txt", "w");
    printf("Enter the text with @ at end : ");
    while ((ch = getchar()) != '@')
    {
        putc(ch, fp);
    }
    putc(ch, fp);
    fclose(fp);
    fp1 = fopen("TestDataFile1.txt", "r");
    fp2 = fopen("TestDataFile2.txt", "w");
    printf("Enter number of characters to copy : ");
    scanf("%d", &num);
    fseek(fp1, 0L, SEEK_END);
    length = ftell(fp1);
    fseek(fp1, (length - num - 1), SEEK_SET);
    while ((ch = getc(fp1)) != '@')
    {
        putc(ch, fp2);
    }
    putc(ch, fp2);
    fclose(fp1);
    fclose(fp2);
    fp2 = fopen("TestDataFile2.txt", "r");
    printf("Copied text is : ");
    while ((ch = getc(fp2)) != '@')
    {
        putchar(ch);
    }
    printf("\n");
    fclose(fp2);
}

You have to dream

before

Your dreams can come true@

Enter number of characters to copy :

20

Copied text is : dreams can come true

Aim:

Write a program to `reverse` the first `n` characters in a file.

- open a new file "`TestDataFile3.txt`" in read/write mode
- write the content onto the file
- read the number of characters to copy
- copy the specified number of characters into a string
- reverse the string
- overwrite the entire string into the file from the beginning
- close the file
- open the copied file "`TestDataFile3.txt`" in read mode
- read the text from file and print on the screen
- close the file

Source Code:

```
Program1506.c
```

```

#include <stdio.h>
#include <string.h>
void stringReverse(char[]);
void main()
{
    FILE *fp;
    int num, i;
    char ch, data[100];
    fp = fopen("TestDataFile3.txt", "w+");
    printf("Enter the text with @ at end : ");
    while ((ch = getchar()) != '@')
    {
        putc(ch, fp);
    }
    putc(ch, fp);
